VIETNAM_Bach Lam Bridge, Part I

Inaugurated in June 2018, Bach Lam Bridge has been recently provided with a ground breaking illumination system, which enlightens the architectural layout of the extra-dosed bridge with a surprising colour changing effect at night.

Built in less than two years according to the most advanced construction technologies, Bach Lam Bridge is the first two-pillar cable-stayed bridge of Yen Bai province to cross the Red River. With a global width of 18m and a total length of 435m, Bach Lam Bridge includes 7 spans and is fitted with two 20m high piers of prestressed concrete supported by a reinforced cable-stayed structure. Conceived and fulfilled by PhuThanh JSC, leading company in the installation of LED technology in Vietnam, the lighting scheme of the bridge aims at illuminating its central part with a dynamic colour changing effect, focusing on the pillars and their cables, which define the architectural layout of the bridge.

U.S.A._A touch of colour for St. Louis Firehouse

The Northeast Ambulance and Fire Protection District (NEAFPD) in Beverly Hills, St. Louis County counts now on a new 27,500-square-foot, two-story brick and stone firehouse, which includes five vehicle bays and a two-story structure for the District headquarters office. Built to resist seismic and high wind events, the facility serves as a natural disaster relief center for local residents. The frosted glass panels of the top turret have been recently lit up in bright colours by an array of Jade 16 in RGBW colour configuration delivered by GRIVEN USA to draw attention to the brand new building. Watch the video to find out more!

DARC AWARDS_Lights in the...DARC

We are glad to announce that two recent installations based on our lighting fixtures have been shortlisted in the 2019 DARC AWARDS. Prokhorov Field Belfry, Ukraine has been shortlisted in the category: "Structures_Low budget", while the artistic installation still on display at Lights in Alingsas, The Source, Sweden, has been featured in the category "Art_Low budget". Reserved to independent lighting designers, light artists, interior designers and architects, the on-line voting will be available till Friday, 18 November. The winners will be finally revealed at [d]arc night, the [d]arc awards ceremony, which will be held on 05 December, 2019 in London. Fingers crossed!!

Prokhorov Field Belfry, Ukraine
IN STRUCTURES: LOW BUDGET

The Source, Sweden
